

PowerWood

Custom Cedar Done Right.

PowerWood's facility in Agassiz, British Columbia Canada is geared to produce a diverse mix of specialty Western red cedar, Alaskan yellow cedar and Western hemlock finished products. We are strategically set up to oversee the entire process — from handling raw materials to crafting the finished products PowerWood expertly manufacture nature's best building material, any way you like it.

WE OFFER #2 & BTR NO HOLE ROUGHERHEADED GREEN WESTERN RED CEDAR

We have regular runs of two inch rougherheaded cedar. With our Stetson Ross line and regular supply of coastal cedar material, we are well positioned to sell full packs and full truck loads of competitively priced #2 & BTR No Hole. We produce a quality board that is always well received by our customer base.

To ensure top-notch quality, PowerWood experts thoroughly inspect each piece before shipping, guaranteeing that custom orders meet precise specifications. We stock a wide range, from 2X4 through 2X12. Just tell us your building needs and we'll size up the situation right there on the spot.

Custom Cedar Done Right.

APPEARANCE TIMBERS

PowerWood's stock of cedar timber is built around the species' superior aesthetics. Our stock is either all clear of knots and defects or is appearance knotty.

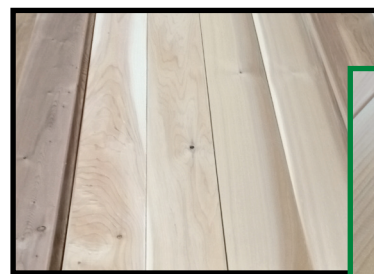

For further quality control, PowerWood experts inspect every piece before it's shipped out and hand-select custom orders to exact specifications. We stock a wide range of timber sizes, from as small as (4x4) to as big as you need them (12X12).

C&BTR BOARDS AND PATTERNS

Cut predominantly from fine grain logs harvested from multiple locations in British Columbia, all material is inspected during saw-milling and analyzed by a number of different criteria such as the number of acceptable defects, tightness of grain, sapwood content, grain direction and consistency in fiber.

We have many different avenues for our clears, so we are able to inventory a large and diverse volume of material. On-site customization transforms many of our full-sawn clears into high-end decorative applications, 1X4 through 1X12 emphasizing our focus on defect-free patterns.
